

ACOUSTICS
by design

Designed to be suspended from the ceiling or wall, reSorb Bars are efficient sound absorbers and provide some sound blocking properties.

The system comprises sound absorbing bars connected to a top rail and bottom stabilising plate. Fully customisable for both bar height and rail length.

The sound absorbing bars are laminated with fabric on both sides, with a variety of acoustically transparent fabrics available front and back. The core material is visible from the side and comes in a choice of three colours.

reSorb Bars may be used to create a more private environment between areas such as open plan office and breakout or to zone areas such as soft seating.
