

ACOUSTICS
by design

**Blend in or stand out.
Either is possible with a
reSorb Panel.**

**A 40mm thick acoustic core
is wrapped in plain or printed
fabric. reSorb Panels reduce
reverberation (echo) whilst
creating either an artistic
statement or blending with
the existing colour of a room.**

A wide choice of plain colour acoustically transparent fabrics is available from the Camira Cara and Lucia ranges, or fabric may be printed with any high resolution digital image to create a work of art.

Maximum panel size 2700 x 1200mm. Several panels may be used to cover larger areas.

Easily fixed to most flat, solid surfaces, a reSorb Panel is simple to install; a screwdriver and spirit level are all that's needed. Alternatively, Acoustics by Design can install if required.
