

ACOUSTICS
by design

Developed as a decorative finish for meeting room walls, atriums, classrooms, halls and other spaces where high reverberation causes discomfort and reduces speech intelligibility.

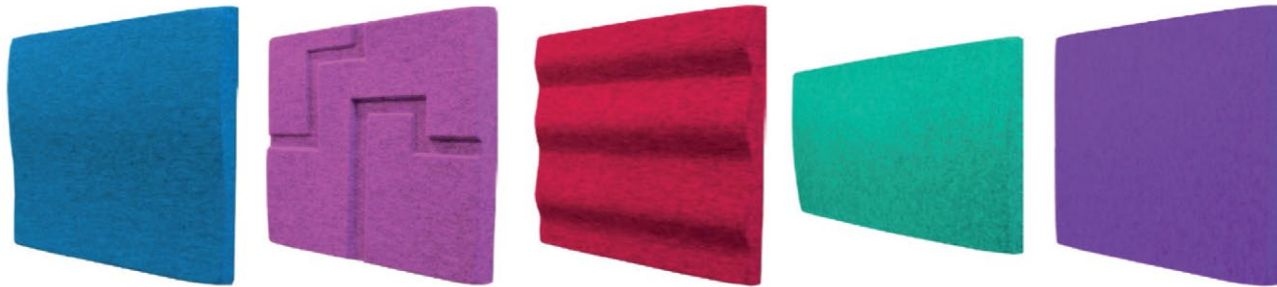

A huge range of colours are available and currently eleven surface finishes.

The reSorb Tiles have been acoustically tested by an approved European lab and are class A absorbers with the additional acoustic absorption fitted as standard

3D TILES

Quickly and easily installed using the fitting kit supplied.

The system may also be installed as a free standing or hanging system, ideal for breaking up large open plan areas, creating work spaces and breakout areas. With a unique method of fixing panels back to back.

The material is recyclable.

Fire classification (EN 13501-1: 2002): B-s1, d0.
